

Adjusting Keurig K75 Platinum Brewing System Reservoir Magnet

If the magnet is out of place, the coffee machine may shut off randomly. You will need to realign the magnet.

Written By: Alexander Vo

INTRODUCTION

The magnet is located in the water reservoir of the brewer and functions as a water level sensor that detects when the coffee maker needs to be refilled with water.

Step 1 — Adjusting Keurig K75 Platinum Brewing System Reservoir Magnet

- ⚠ Before starting the repair, make sure that the device is unplugged and the water reservoir is empty.
- Detach the water reservoir from the brewer by lifting the reservoir vertically from the device.

Step 2

- The magnet is located in the bottom of the reservoir.
- Remove the grey lid from the top of the reservoir.
- Insert your hand and manually realign the magnet to where it slides freely in its enclosed area.

To reassemble your device, follow these instructions in reverse order.
